Voyager Rebreather

Courses, training, adventures & support

Bali - Indonesia

BEYOND SCUBA

We are specialists in Voyager rebreather training.

Our goal is to educate the dive community about the benefits of diving with rebreathers. Let us show you why rebreather diving is attracting more divers each day. We are fully committed to ensuring safety and quality in all our training programs and services.

Stay in a luxury double bungalow at our dive centre, with an inviting pool just outside your door. Confined water training is conducted in the pool and all training dives take place at Bali's east and north coast dive sites, where the visibility is excellent and marine life outstanding!

Voyager Rebreather Courses

BEYOND SCUBA provides a modern approach to rebreather training. All our courses are limited to a maximum of two students, ensuring safety, quality and consistency in training. We are committed to ensuring that every student qualifies as a fully competent rebreather diver having gained full knowledge, skills and understanding of every aspect of the training.

Semi Closed Rebreather (SCR) Course

This course provides the training you need to begin diving with a semi-closed rebreather to a depth of 30 metres/100 feet with a no-stop dive profile. Course content includes basic rebreather theory (physics and physiology), operational procedures, Voyager modular configurations, maintenance and emergency procedures.

Closed Circuit Rebreather (CCR) Course

This course provides the next level of training in the Voyager modular approach to rebreather diving. Learn to dive a fully closed-circuit rebreather and experience the thrill of diving without bubbles. Get closer to marine life!

Voyager Rebreather Training

The Voyager system is a modular approach to rebreather training. Students begin by learning the semi-closed configuration and progress to the closed-circuit configuration. This allows a skilled diver, with a good understanding of theoretical and practical diving techniques, to develop basic skills and operating limits gradually with both of the system configurations. The Voyager modular approach means that with just one unit you can dive in both semi-closed and fully closed-circuit configurations as your operating level progresses.

Voyager Rebreather Adventures

Local diving:

Discover beautiful Bali underwater, a must see for all divers!

Liveaboard diving:

Get carried away by the world's richest marine environment on board one of Indonesia finest liveaboards!

Voyager Rebreather Support

Let us arrange your trip aboard a liveaboard, making the boat of your choice a rebreather-friendly vessel for the duration of your trip. Choose your destination in the beautiful Indonesian archipelago and let us handle all logistical arrangements on your behalf. We only work with professional liveaboards offering the highest level of service.

We offer:

- Courses
- Liveaboard trips
- Guided dives & Voyager Rebreather unit rental
- Rebreather tank rental
- Scrubber material
- Gas mixes
- Booster pump rental
- Accommodation
